

Humanity's "Code Red" on Climate Change

A selection of scholarship from Project MUSE publishers exploring the human causes and effects of climate change.

In August 2021, the Intergovernmental Panel on Climate Change (IPCC) released a report that details the urgent threat of climate change over the coming decades. The report calls for immediate action to address the deeply entrenched global systems that rely on and perpetuate the consumption of greenhouse-gases. U.N. Secretary-General António Guterres described the findings as a "code red for humanity."

The scope of this challenge is daunting. Each year brings increased temperatures, extreme weather, and wildfires signifying the damages already done. Preventing further destruction will require a broad understanding of the myriad social, political, cultural, and economic forces that have exacerbated the problem.

"Humanity's 'Code Red' on Climate Change" explores the human causes and effects of climate change, and the urgency of action to avert future catastrophe.
